

B1 a plurality of the linear motors each comprised of the movable section, the outer frame and the fixed section are arranged to surround the screw shaft.

B2 4. (TWICE AMENDED) An injection mechanism of an injection molding machine according to claim 1, wherein a hole section is provided in the outer frame, the fixed section of each of the linear motors is comprised of a lid closing the hole section, and electrical elements of the fixed section of each of the linear motors are fixedly attached to an inside of the lid.

B3 7. (ONCE AMENDED) An injection mechanism of an injection molding machine according to claim 2, wherein the movable section of each of the linear motors is comprised of a prism having a rectangular cross section, and electrical elements of the linear motors are provided on four planes of the prism, respectively.

Please ~~ADD~~ new claims 12-15:

B4 12. (NEW) An apparatus, comprising:

BEST AVAILABLE COPY

an injection unit extending in an first direction; and

a motor to linearly drive the injection unit in the first direction, comprising:

a frame,

a first portion attached to the injection unit to move within the frame in the first direction, and

a second portion detachably attached to the frame and facing the first portion.

13. (NEW) The apparatus according to claim 12, wherein the frame defines
